TAMWORTH COMPANY CELEBRATES REGIONAL BUSINESS AWARD

Tamworth computer forensics company, Disklabs, left stiff regional competition standing with its success at the coveted ICT Excellence Awards 2008.

The growing and successful Tamworth company, which currently employs sixteen members of staff at its head office, was highly commended in the Best Added Value Service Award category for its Forensic Data Recovery (FDR) service.

The FDR service recovers lost data in a forensically sound manner so that it is admissible as evidence in court cases. Disklabs also trains legal professionals on forensic computing and is currently offering courses for criminal solicitors based in the Midlands.

Disklabs Managing Director, Matt Jones, said, "we're delighted to be honoured with this award and the wider recognition it brings our staff. The exposure to potential clients and prospective team members will be beneficial in raising our profile locally and nationwide. We're very proud of the service we offer and the business itself, so we look forward to demonstrating our capabilities to wider audiences in the computer forensics and law enforcement communities."

Mike Musson, ICT Cluster Manager, added: "This year we've seen the highest standard of award entries yet and competition has been incredibly tough. The judging process has been rigorous and the panel faced a major challenge in deciding the final winners due to the sheer quality, innovation and excellent service provided by all the finalists. The awards are testament to the quality and diversity among technology companies in the West Midlands region."

The ICT Excellence Awards were presented at the evening Awards event following the Annual ICT Cluster Conference held at Birmingham Motorcycle Museum on 20 November 2008.
